

Paul Hastings is committed to sustainability and environmental leadership in all facets of our business, including in our own operations and in our work with clients. We are dedicated to improving the sustainability of our business operations and limiting their environmental impact, both because it is the right thing to do, and because it is essential to our role as an elite global law firm. As energy and the environment become increasingly important in the global marketplace, so too will this role. We fulfill this mission by developing innovative and flexible solutions that are environmentally conscious, efficient, and workable.

Paul Hastings formed its Go Green Committee in 2008. The Go Green Committee, which focuses on reducing resource consumption and creating awareness about environmental issues, has been successful in affecting many significant changes. Throughout our global offices we have migrated to double-sided printing, eliminated certain hard copy paper distributions, and automated a significant number of administrative processes to reduce paper consumption. The firm has progressed in reducing energy consumption through modifications to our information technology systems including implementing energy-saving mode on all firm computers.

Beyond these changes to our internal operations, we are proud that our San Diego office is resident in a Leadership in Energy and Environmental Design (LEED) certified building.

In 2009, the ABA-EPA Law Office Climate Challenge recognized Paul Hastings as a Climate Change Partner. This honor signifies that all nine of our U.S.-based offices meet the ABA-EPA's best practices for office paper management. We are pleased to be part of the ABA-EPA Law Office Climate Challenge and among those firms leading the legal industry in sustainability.
